

The background is a solid red color with a faint, white circuit board pattern. The pattern consists of thin white lines representing traces, with small white circles at various points representing solder pads or vias. The pattern is more dense and detailed towards the bottom of the image, where it resembles a complex microchip layout.

MODEL

PRODUCT Ecosystem

BSS (Business Support System)

A comprehensive management system that covers sales resources, tariffs, product policies, customer care, and the entire reporting system in the fields of Mobile, Fixed-line, and IT solutions.

CRM

Customer management system, including functions like: customer management, marketing, sales support, customer care, reporting and analysis, etc.

OSS (operation support system)

Manage the maintenance of infrastructure equipment for nationwide telecommunications network.

ERP

System that integrates business processes in the enterprise - across finance, human resources, procurement, distribution and other departments.

SMOS

(Sale Management & Operation System)

The sales management and operation system can automate the entire operation process, manage execution, monitor, and evaluate business performance metrics. Additionally, SMOS applies AI to analyze data trends, providing recommendations and alerts across various sales management activities within the enterprise.

IPCC (IP calling center)

The calling center system that responds to customers automatically. Automated customer care through Call In and Call Out on VoIP platform, combining AI technology to process natural language, synthesize artificial voices and process customer dialogue flows according to scenarios.

Cybersecurity

Managed security service. Main functions including:

- 24/7 online monitoring of all information security issues on clients' IT systems.
- Detect information security incidents, attacks on the system and conduct emergency response and troubleshooting according to a closed process.

Digital Twin

Digital Twin solution based on AI technology and 360o photo with global standard for security. Main functions including:

- Manage asset, facility, human resource, project progress.
- IoT integration, supports inspections and maintenance.

Viettel Money (mobile wallet)

E-wallet product with main functions:

- Online payment.
- Bank account link.
- Online shopping integration.

Data/AI platform

Viettel AI Platform provides foundational technologies using artificial intelligence such as Image Recognition and Processing, Natural Language Processing,... to help automate the work of organizations and businesses in an optimal and more efficient manner.

Automation Testing

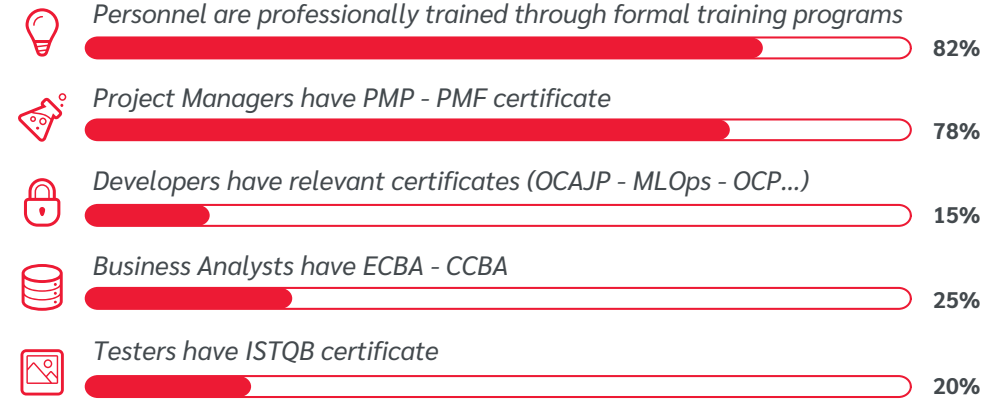

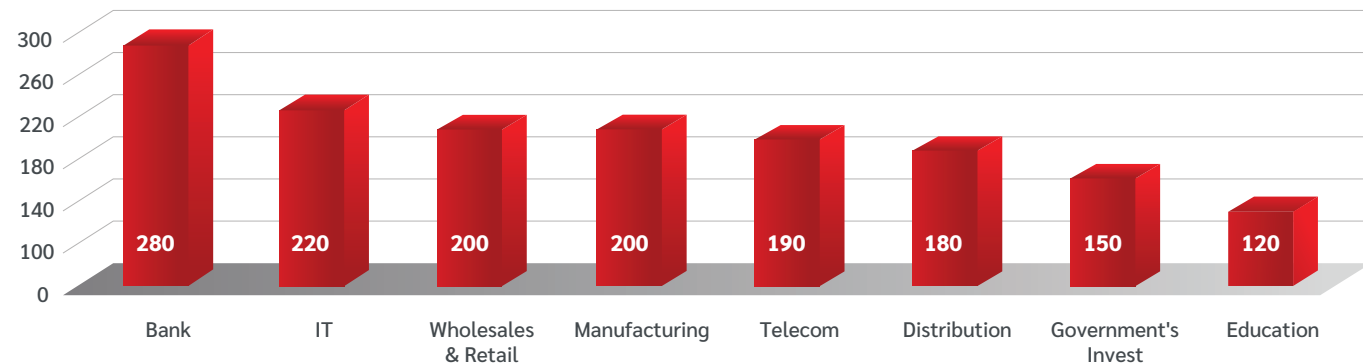

VTIT Automation Testing is an ecosystem consisting of four tools: VTIT IDE with integrated Runner, Testcase Management, and Testkit, developed by Viettel Software. These tools are tightly integrated to provide a comprehensive solution for the automated testing process.

Personnel

CAPACITY

1500⁺ IT experts in the fields of: *BFSI, Logistics, Telecoms, Manufacturing, Healthcare, Wholesales & Retail...*
Technology: AI/Big Data, ML, Blockchain, etc
